Feature f-1

Developmental Biology

Information for Authors

Developmental Biology will publish papers containing new and significant information bearing on developmental mechanisms of general interest. Analysis of development, growth, regeneration, and tissue repair in plants and animals at the molecular, cellular, and genetic levels are topics suitable for the journal. Descriptive work, at either the anatomical or molecular level, will not be published unless it leads to fundamentally new conclusions.

Articles usually do not exceed 15,000 words and must be preceded by an abstract of about 200 words that should be fully intelligible by itself.

Rapid Communications present findings that will have an immediate and significant impact and should therefore be made known to other researchers as quickly as possible. These reports will be evaluated by reviewers within one week of receipt and, if accepted, will be published in the next available issue. Rapid Communications are limited to two printed pages consisting of 1200 words, two tables or figures, and eight references. An abstract not exceeding 150 words should be included. Rapid Communications may be submitted by FAX if they do not contain photographs.

Review and memorial articles usually are solicited; however, the Editor-in-Chief invites inquiries and suggestions. Review articles are subject to the same review process as regular articles, but receive priority publication.

Manuscripts should be as concise as possible; full documentation of results should be combined with maximum brevity and clarity. All papers will be published in English. Quantitative data should be presented so that the reader can readily judge statistical significance of differences. The discussion section should relate the present work to previous knowledge but should not be expanded into a review of the field. The standard order of sections is: abstract, introduction, materials and methods, results, and discussion. Combined results and discussion may be used. Acknowledgments, references, footnotes, tables, and figure legends should follow the discussion in that order. Number all manuscript pages consecutively and type double-spaced throughout. Provide a running title of 35 or fewer letters and spaces. Use footnotes sparingly; cite them with superscript numbers; type them on a separate sheet. Do not italicize for emphasis.

Abbreviations and units should be used consistently. Consult the lists published in the *Proceedings of the National Academy of Sciences (USA)*, the *Journal of Biological Chemistry*, and *Biochemistry* for standard abbreviations which need not be defined. Collect all abbreviations into a footnote and refer to it at the first use of an abbreviation. The use of units should follow the Système International. Use prefixes, e.g., μM, not 10^{-6} M. Note that M stands for molar, not mole. Use hr, min, sec, rpm, and cpm without definition, without a period, and without an "s" in the plural (i.e., 20 min).

Figures should be numbered consecutively in the order of their appearance and each should have a descriptive legend. Mark all figures with the orientation and with the authors' names. All figure sizes mentioned below are the "*preferred*" sizes. *Line drawings* will be reduced in accordance with the complexity of the figures. Good quality prints are acceptable. The maximum size submitted should be 215 × 280 mm. *Photographs* should be submitted as actual size for reproduction, fitting column (90 mm) or page (185 mm) width. Sets of micrographs mounted on 10- to 12-point *flexible* illustration board and in combinations up to 203 × 267 mm in size are acceptable. For best reproduction, provide clear, glossy prints with adequate contrast. The magnification should be indicated by a bar on the photograph. Figures that are to appear together as one plate should have comparable contrast and density and should be mounted on 10- to 12-point *flexible* illustration board or paper as close together as possible. Do not combine line drawings and halftones into composite plates; if you wish them to appear together, submit unmounted original art and a layout sheet. The printer will place thin white lines between the figures on each plate. Providing an overlay that indicates the most critical areas of the micrograph will aid in ensuring high-quality reproduction.

Color figures. Two color plates will be published *free* of charge in each article, provided color is deemed scientifically necessary by the reviewers and the Editorial Board. Additional color figures will be charged to the author. See the instructions above if mounting is necessary; color figures *must* be submitted on flexible board due to the nature of the reproduction process.

Suggestions for **cover photographs** are welcome. Submit them as slides *with* $8\frac{1}{2} \times 11$-inch color or black-and-white prints to accompany specific articles. A short (one-line) legend should accompany each photograph.

Tables should be typed on separate pages and numbered consecutively with Arabic numerals; each should have a concise heading.

References to the literature should be cited as: Doe (1987) has observed that . . . ; (Doe, 1988). Doe *et al.* (1988) should be used in the case of articles with more than two authors. Use suffixes a, b, etc., following the

date to distinguish two or more works by the same authors in the same year (Doe, 1987a,b). Arrange literature citations in the bibliography according to the surname of the author, using the following styles:

Colin, A. M. (1986). Rapid repetitive microinjection. *In* "Methods in Cell Biology" (T. E. Schroeder, Ed.), Vol. 27, pp. 395–406. Academic Press, San Diego, CA.

Holley, J. A., and Silver, J. (1987). Growth pattern of pioneering chick spinal cord axons. *Dev. Biol.* **123,** 375–388.

Abbreviate journal titles according to *Chemical Abstracts Service Source Index,* 1985. Do not refer to abstracts or papers which have not been accepted for publication.

Proofs and Reprints. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.

To submit a manuscript, send three complete copies including illustrations to Peter J. Bryant, Editor-in-Chief, *Developmental Biology,* 4215 Biological Sciences II, University of California, Irvine, California 92717-2280. Telephone (714) 824-4715; E-mail address: PJBRYANT@UCI.EDU; Fax: (714) 824-7399. In the cover letter to the Editor or on the manuscript title page, indicate the name, address, and telephone number of the author who should be contacted in editorial matters. Please do not suggest reviewers or associate editors.

Conditions of publication

Original papers only will be considered. Submission of a manuscript implies the authors' assurance that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Explicit proof of these implied assurances may be required at the Editor's discretion. Articles and any other material published in *Developmental Biology* represent the opinions of the author(s), and should not be construed to reflect the opinions of the Editor, the Publisher, or the Society for Developmental Biology.

Publication of a research article in *Developmental Biology* is taken to imply that the authors are prepared to distribute freely to interested academic researchers for their own use any clone (of cells or DNA or antibodies) used in the experiments reported. Manuscripts that report research involving human subjects must be supported by a copy of the document authorizing the proposed research, issued and signed by the appropriate official(s) of the institution where the work was conducted.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

All genetic sequence information published in *Developmental Biology* must also be deposited with GenBank. When you submit such a manuscript, please indicate your GenBank accession number. If the data have not yet been submitted, we will provide a GenBank submission form and will expect you to send us the accession number as soon as it becomes available. Published articles will include a footnote indicating the database to which data have been supplied and the accession number when this information has been supplied by the authors.

Personal computer disks

Authors are encouraged to submit floppy disks with their articles once the manuscripts have been accepted and after all revisions have been incorporated onto the disk. Please label the disk with the type of computer used, the type of software and the version number, and the disk format. Clearly indicate the file names and contents of each file.

Manuscripts will be edited according to the style of the journal, and the proofs must be read carefully by the author. Please note that tabular material will be typeset conventionally. Every effort will be made to use the disk for the remainder of the article.

For further information, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, 525 B Street, Suite 1900, San Diego, California 92101-4495; telephone: (619)699-6429; fax: (619)699-6801).

For information about advertising in *Developmental Biology,* please contact Alison Ward, Advertising Coordinator, Academic Press, Inc., Journal Promotion Department, 525 B Street, Suite 1900, San Diego, California 92101-4495 (fax: (619) 699-6380).
